Life Cycle Part & Component Knowledge Sharing Portal

Industry Day 8 May 2007

Background

Recommendations

- Create a Life Cycle
 Part & Component
 Knowledge Sharing
 Portal
- Develop Improved
 Parts Management
 Tools and Metrics

Related Recommendations

- Make PartsManagement aPolicy andContractualRequirement
- Revitalize Parts
 Management
 within the
 Systems
 Engineering
 Discipline

Issues

- Parts management is difficult
 - Data exists in numerous, diverse information systems
 - Many systems cannot communicate or exchange data
 - Some systems are old and difficult to use
 - Systems contain data that are duplicative, incomplete, or inaccurate
- Parts management is costly
 - Part and component selection
 - Part and component cataloging / documentation
 - Part and component logistics support / footprint management
 - DMSMS

05/25/17

4

LCPC KSP Objectives

- Improve parts management throughout DoD
 - Eliminate duplication
 - Improve data accuracy
 - Reduce errors
 - Decrease costs
 - Enable effective data system management
- Promote and support increased standardization
 - Lower life-cycle costs, shorter customer wait times, and fewer DMSMS events
 - Increased quality, reliability, and efficiency.
- Promote data sharing and parts-related research
 - Enable easy and effective conversion to a common data exchange standard
- Permit greater integration of parts data resources between government and industry
 - Promote and facilitate increased win-win voluntary data sharing
- Provide a single point of entry for parts management data and tools
 - Promote and facilitate creation of a shared parts management community and network

Approach

- Develop LCPC KSP quickly through spiral development approach
 - Establish shared Government/Industry portal development team
 - Create a virtual infrastructure to support PM community & network
 - Integrate and leverage DMSMS knowledge sharing portal
 - Identify a viable government/industry parts data exchange standard
 - Start developing a standard-based part selection query capability
- Evolve portal through customer-driven requirements
 - Identify Government/Industry governing body to lead & own project
- Employ COTS technologies to the maximum degree
 - Leverage and support existing parts-related marketplace
 - Integrate existing products, services & tools to benefit entire community

Community Ownership & Governance

- Initial portal concept and prototype developed through Government/Industry collaboration (PMRIPT & PSMC)
- Transition to "Part Management Improvement Consortium" (notional name)
- Owned by the members, governed by a Board of Directors, and supported by a small staff
- Self-funded through low membership dues (Not-for-profit - cover operating cost only)

Benefits to the Members

- Lower costs
- More efficient & effective parts management
- Improved communication and collaboration
- Access to valuable tools and resources
- Resources to improve data quality
- Resources to enable low cost data conversion to community standard
- Access to unique portal presence for every community member company

Spiral #1: Initial Portal Presence

- Launch LCPC KSP home page
- Engage and involve stakeholder community
- Enable access to and use of wide range of existing resources (DMSMS, GIDEP, PMT, ASSIST, WSIT, E-Mall, SDW, DSCC resources, FLIS, etc.)
- Provide connectivity to all parts-related sites (within parts management network hub)
- Promote portal growth and community ownership
- Initiate transition to community governance structure

Production and Deployment

Operations and Support

Third indenture item dropdown menu Click on a menu item and go to dedicated pa(pa) for that item

This destination contains connections to informatio and sites that are specific to parts management within the given program phase hese might include people and disciplines such as

Program Managers and Program Teams
Acquisition and Contracting
Systems Engineering
Design Engineering
Quality Management
Parts Managers
Manufacturing

Also included are activities or events
Milestone Reviews
Parts Management Planning
System Test and Evaluation
Selecting Parts

In addition are destinations and resources that are relevant to people working in the phase
Preferred parts
Oualified Parts

Any other topic that is relevant to the phase and somehow connected to parts management might be included such as Training Opportunities

Standardization Best Practices

Each phase of the product life cycle has parts related considerations and activities the extent we can identify what these are and provide value added information for members of the community should include them in the portal design

Schools and Universities

Certifications and Qualifications

<u>Conferences, Symposia, &</u> <u>Traveling Road Shows</u>

Community Calendar

Third indenture items dropdown menus

These destinations contains information and connections to sites that address partrelated education and training such as:

Online Education and Training (Relevant educational opportunities available online

Schools and Universities
(School and University web links and relevant classroom courses and curriculum)

Certifications and Qualifications
(Information about relevant certifications and qualifications and connections to sites where one can learn more or where they can be obtained

Conferences, Symposia, & Traveling Road Shows
(Information about and connections to sites addressing relevant upcoming or traveling educational opportunities)

Community Calendar
(Relevant upcoming educational opportunities offered by and posted from within the communitye.g. Industry Day
(also mirrored in What's New))

Other useful information or connections may be listed here if the Education and Training section provides the best fit for their placement within the portal

Spiral #1: Membership Growth

- 1. PMRIPT & PSMC
- 2. DoD Parts Community
- 3. OEMs & System Integrators
- 4. Major Part Suppliers and Services
- 5. Government Departments and Agencies
- 6. Broader Parts Community

Spiral #2: Standard for Parts Data Exchange

- Approve, Initiate, and Demonstrate Part Data Exchange Standard
- Employ Part Selection Query Interface Tool to Demonstrate Application of Standard
- Translate, Map, and Build Standard-based
 Query Interface for Eight Selected Part Types
 - Microcircuits
 - Fasteners
 - Motors
 - Pumps

- Valves
- Batteries
- O-Rings
- Capacitors

Spiral #2: Part Selection

- Part selection user interface
 - User interface screens
 - Eight initial part types
 - Evolve to include all relevant part types
- Part selection and query logic
 - Standard code for communicating part parametric data (ISO-22745, ISO-8000)
 - Interface with part data sources and services
- Strategy and Rules for integrating Government and Industry
 - Parts data sharing
 - Preferred parts & priority ordering of query results
 - Protection of proprietary data
- Planning and preparation for Spiral #3 capability demonstration

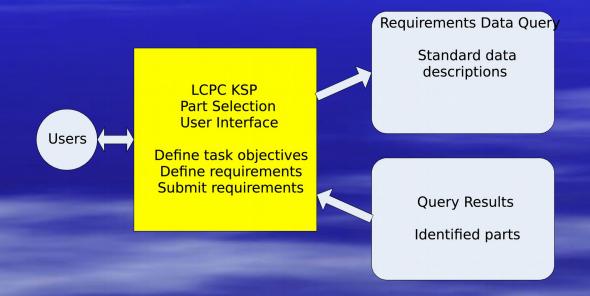

Prototype Part Selection Tool

Accessible through:

- Site Map
 - Part Selection Tool
- Tools and Services
 - Part Selection Tool
- Life Cycle Parts Management
 - Design and Development
 - Design Engineering
 - Part Selection Tool

Part Selection Requirements Definition

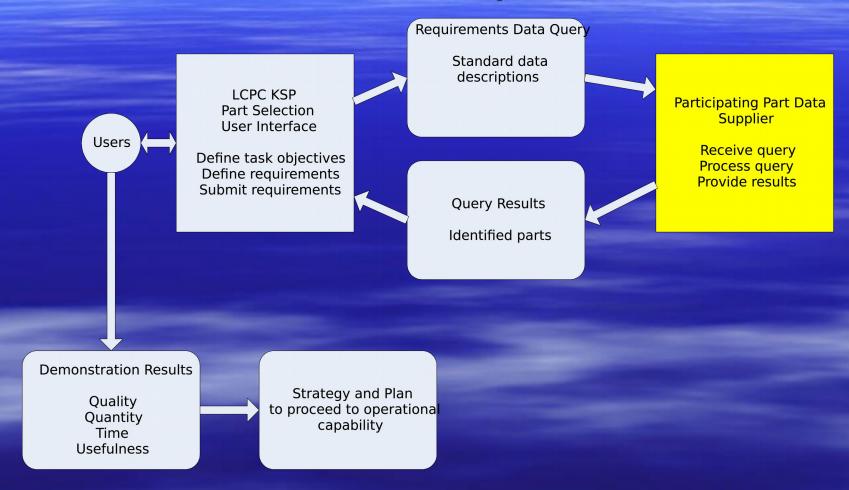

Part Selection Requirements Definition Screen Shot (microcircuit)

Spiral #3: Capability Demonstration

- Plan and organize demonstration process and protocols
- Invite 3rd party participation part location service providers
- Conduct capability demonstration
 - Ability to receive query in standard (XML) format (ISO-22745, ISO-8000)
 - Ability to match query to available parts
 - Ability to return useful query results
- Evaluate demonstration results
 - Evaluation Team Government and Industry Engineers (part selectors)
 - Standard query templates
 - Score results
 - Identify gaps
- Develop requirements / strategies for initial operating capability
 - Assure fair process and level playing field
 - Protect DoD, Industry, and participant interests
 - Negotiate service provider revenue model strategies and capabilities
 - Avoid legal issues

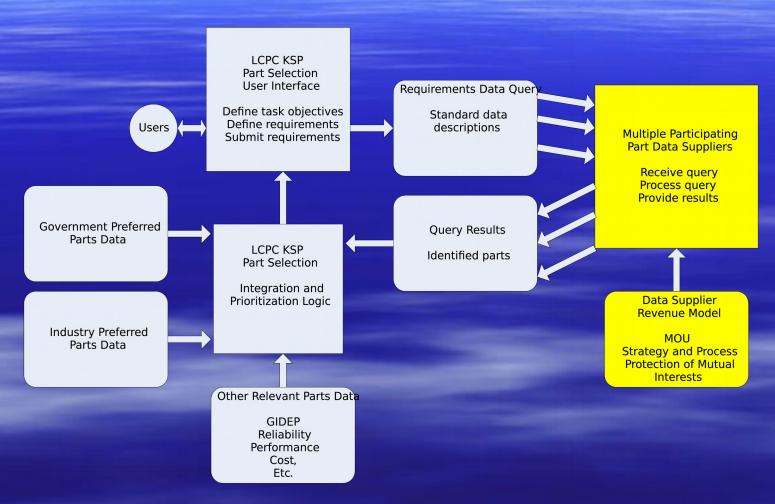

Capability Demonstration Concept

Spiral #4

- Achieve initial operating capability for part selection capability
 - Negotiate business strategy and MOU with participating data suppliers
 - Develop capability to integrate part query results from multiple sources and to sort query results using Government and Industry standardization and preference models
 - Establish mechanisms to assure long term viability (funding) and continuous improvement of LCPC

Part Selection Operational Model

Query by Part Number

Query: Part Number

Microcircuit	Part Characteristics - Parametric Data								Source	Availability	Cost	
Part Number	#	\$	@	&	%	\$	^	‡	=	Company	Quantity	Each
